

UNIQUE TECHNOLOGY SOLUTIONS

PROPOSAL FOR THE INTEGRATION OF DIGITAL LITERACY TRAINING IN THE LUTHERAN SCHOOL SYSTEM

A Technology Integration and School Partnership Initiative

DOCUMENT DETAILS	
END USER	Lutheran Church in Liberia School System
PROJECT	Digital Literacy Partnership
CONTRACTOR	Unique Technology Solutions
TECHNOLOGY	Thin Client Solution –Centralized Management
DATE	July 14, 2026

1.0 Introduction

The rapid advancement of digital technology is transforming education, employment, business, communication, healthcare, government services, and virtually every aspect of modern society. Digital literacy is therefore no longer an optional skill; it is a fundamental requirement for effective participation in the twenty-first-century economy.

In Liberia, many high school and university students complete their education with limited practical exposure to computers, productivity applications, internet research, digital communication, cybersecurity awareness, and other essential technology skills. In many institutions, the challenge is not only the absence of computers but also the lack of a complete and sustainable framework for integrating technology into the educational environment.

Some schools may have computer equipment but lack qualified instructors to manage the training program. Others may have instructors but inadequate equipment, poorly maintained laboratories, limited technical support, or no structured digital literacy curriculum. As a result, computer laboratories may become underutilized, equipment may remain out of service for extended periods, and students may not receive the practical digital skills required to achieve meaningful learning outcomes.

Recognizing these challenges, **Unique Technology Solutions (UNIQUE)** proposes a comprehensive **Technology Integration and Digital Literacy Program** for high schools, colleges, and universities in Liberia.

The initiative goes beyond the supply of computers. It provides an end-to-end technology integration model that combines the establishment and modernization of computer laboratories, deployment of qualified instructors, delivery and management of structured digital literacy training, continuous maintenance of ICT equipment, and ongoing technical support.

Through this approach, Unique Technology Solutions seeks to ensure that technology investments made by educational institutions translate into measurable educational outcomes and sustainable digital skills development.

2.0 About Us

Unique Technology Solutions (UNIQUE) is a Liberian-owned ICT consulting and systems integration firm that delivers tailored, innovative, and reliable technology solutions designed to help institutions and businesses achieve their strategic objectives while maximizing the value of their technology investments. Our team comprises highly skilled subject-matter experts across a broad spectrum of ICT disciplines, including Software Development, Cybersecurity Advisory and Implementation, Network Design and Deployment, Server and End-User Virtualization, Cloud Infrastructure Architecture, Technology Integration, Data Warehousing, ICT Equipment Supply, and Human Capacity Development.

Through our School Partnership Program, UNIQUE provides comprehensive solutions for the supply, installation, maintenance, and lifecycle management of computer laboratory infrastructure--delivering structured computer literacy programs tailored to meet the needs of partner institutions.

Our portfolio reflects a strong track record in ICT equipment supply and service delivery for leading institutions, including LIBTELCO, the Liberia Revenue Authority (LRA), LISGIS, Afriland First Bank, John F. Kennedy Memorial Hospital, Starz University, Grand Bassa University, and several other prominent national organizations.

Furthermore, UNIQUE established a strategic joint venture with Unique Solutions–Gambia, a globally recognized IT consulting firm, to deliver maintenance and technical support services to the Central Bank of Liberia and its network of commercial banks. This partnership centered on the management and operational support of the Bank's 4G wireless network infrastructure, underscoring our proven capability to execute mission-critical ICT projects at a national scale.

- Software Development
- Cybersecurity Advisory & Implementation
- Network Design and Deployment
- Server & End-User Virtualization
- Cloud Infrastructure & Data Centre Solutions
- ICT Infrastructure Integration
- Data Warehousing
- ICT Equipment Supply and Maintenance
- Human Capacity Development
- School Computer Lab Partnership Programs
- 100% Hands-On Networking & System Administration Training (including SOPHOS Security Appliances)

Beyond corporate and government institutions, UNIQUE actively collaborates with high schools, colleges, and universities across Liberia to establish modern computer laboratories, provide ongoing maintenance and technical support, and deliver specialized ICT training programs tailored to institutional needs. Our work in the education sector reflects our commitment to strengthening digital learning and expanding access to sustainable technology nationwide. Our organizational culture and professional work ethic form the foundation of our success. UNIQUE is guided by a strong commitment to building strategic alliances with leading software and hardware providers in order to deliver high-quality, reliable, and sustainable technology services to our valued clients. We prioritize long-term partnerships with every institution we serve, ensuring continuity, trust, and consistent support rather than short-term project engagement.

Our corporate policy is rooted in strict quality control standards. Every assignment is handled by qualified professionals who ensure that client expectations are met, operational goals are achieved, and service delivery maintains the highest level of excellence.

UNIQUE's mission is to relieve institutions of the technical burden associated with managing computer laboratory infrastructure. We achieve this by deploying the required number of computer workstations using NComputing L300 thin-client technology—an energy-efficient and cost-effective solution that delivers optimal performance while significantly reducing power consumption. All deployments are guided by detailed assessments conducted by our technical team to ensure that each lab is properly sized and equipped.

We take full responsibility for the maintenance and replacement of any damaged or malfunctioning equipment and accessories, ensuring uninterrupted service delivery at all times. As we expand our program to more schools nationwide, we remain firmly committed to maintaining the highest standards of quality across all our operations.

Over the years, we have consistently demonstrated the skills, experience, and technical expertise required to make a meaningful impact—transforming the lives of the next generation of leaders by providing robust digital infrastructure and equipping them with the practical competencies needed to thrive in today's technology-driven world.

UNIQUE is presently collaborating with **STARZ College of Science and Technology** to deliver continuous maintenance and technical support for its ICT infrastructure. This

engagement includes the management of eight (8) computer laboratories strategically distributed across all colleges within three separate campus locations.

Our educational partnerships further span numerous institutions across the country, including ***Grand Bassa University, Faith University, Rudolph Kwanue University College, Remedy Movement International Academy, Upstairs Christian Academy, Bishop Marwieh High School, Oceanview High School, Wilson's Daycare Elementary & Junior High School, Building for Tomorrow, LENSUS Nursery Elementary & Junior High School, School of Prime System, Apostolic High School, Samah Jomah Vocational Training Institute, and many others.*** These collaborations reflect our broad national footprint and sustained commitment to advancing digital education across diverse learning environments.

3.0 Problem Statement

Many educational institutions in Liberia face significant challenges in providing effective and sustainable digital literacy education. These challenges may include:

- Inadequate or nonexistent computer laboratories;
- Insufficient computers for students;
- Outdated or nonfunctional ICT equipment;
- Limited access to qualified computer instructors;
- Lack of structured and practical digital literacy programs;
- Inadequate maintenance of computer equipment;
- Limited technical support;
- Lack of effective monitoring of ICT programs;
- Limited institutional capacity to manage technology infrastructure; and
- High costs associated with establishing and maintaining computer laboratories.

In some cases, institutions invest significant resources in purchasing computers without establishing the technical and operational systems required to maintain them. Once equipment develops faults, the absence of regular maintenance and technical support may result in computers remaining out of service for extended periods.

Similarly, a computer laboratory without qualified instructors, structured training content, effective program management, and measurable learning objectives may fail to produce the intended educational outcomes.

The challenge therefore requires more than the procurement of computers. It requires an integrated and sustainable approach that combines technology infrastructure, qualified instructors, structured training, program management, maintenance, technical support, monitoring, and continuous improvement.

4.0 Proposed Solution

Unique Technology Solutions proposes a comprehensive model for integrating technology and digital literacy training into high schools, colleges, and universities in Liberia.

The proposed model is designed around four interconnected components:

4.1. Computer Laboratory Establishment and Technology Integration

Unique Technology Solutions will assess the ICT needs of participating institutions and design computer laboratory solutions appropriate to their student population, infrastructure, budget, and educational objectives.

Services may include:

- Assessment of existing ICT infrastructure;
- Computer laboratory design and planning;
- Supply and installation of computers and related equipment;
- Deployment of cost-effective centralized or thin-client computing solutions where appropriate;
- Network design and installation;
- Internet connectivity configuration;
- Installation of operating systems and productivity applications;
- Electrical and power protection solutions;
- Configuration of printers and shared resources;
- Laboratory security and access arrangements; and
- Testing and commissioning of the completed laboratory.

The objective is to provide participating institutions with a functional, efficient, scalable, and sustainable digital learning environment.

4.2. Deployment of Qualified Digital Literacy Instructors

Recognizing that technology infrastructure alone cannot deliver educational outcomes, Unique Technology Solutions will deploy qualified instructors to participating institutions where required.

The instructors will be responsible for:

- Delivering structured digital literacy training;
- Conducting practical computer laboratory sessions;
- Managing daily laboratory activities;
- Supporting students in developing practical digital competencies;
- Maintaining student attendance and training records;
- Conducting assessments;
- Monitoring student progress;
- Providing reports on program performance;
- Supporting the proper use of ICT equipment; and
- Working with school administrators to ensure the effective implementation of the program.

The deployment of instructors reduces the burden on participating institutions to independently recruit, train, and supervise specialized ICT personnel.

4.3. Digital Literacy Program Delivery and Management

Unique Technology Solutions will support the implementation and management of a structured digital literacy program tailored to the needs of high school and university students.

The program will emphasize practical, hands-on learning rather than theory alone.

Training areas may include:

- Introduction to computers;
- Computer hardware and software fundamentals;
- Keyboarding and computer operation;
- File and folder management;
- Word processing;
- Spreadsheet applications;
- Presentation applications;
- Internet and online research;
- Email and digital communication;
- Digital collaboration tools;
- Cybersecurity awareness;
- Data privacy and online safety;
- Responsible social media use;
- Digital citizenship;
- Introduction to Artificial Intelligence and emerging technologies;
- Career preparation and online job applications; and
- Digital entrepreneurship.

The curriculum may be adapted to different educational levels to ensure that students receive training appropriate to their age, academic level, and future career needs.

4.4. Maintenance and Technical Support

One of the major challenges affecting computer laboratories is the absence of regular maintenance and technical support.

To address this challenge, Unique Technology Solutions will provide ongoing maintenance and support services to participating institutions.

These services may include:

- Preventive maintenance;
- Routine servicing of computers and accessories;
- Troubleshooting and repair;
- Software installation and configuration;
- Operating system support;
- Network maintenance;
- Virus and malware prevention;
- Equipment performance monitoring;
- Replacement recommendations;
- Technical support for instructors and administrators; and
- Periodic ICT infrastructure assessments.

The objective is to minimize equipment downtime and ensure that the computer laboratory remains operational throughout the academic year.

This maintenance and support component is critical to the sustainability of the program. Rather than allowing technical problems to disrupt training for extended periods, institutions will have access to a dedicated technology partner responsible for supporting the continued operation of the ICT environment.

5.0 Unique Technology Solutions' Integrated School Partnership Model

The proposed initiative is built around a partnership model in which Unique Technology Solutions works directly with high schools, colleges, and universities to integrate and sustainably manage technology within the educational environment.

Under this model, the responsibilities may be structured as follows:

Unique Technology Solutions Will:

- Conduct an ICT needs assessment;
- Design the appropriate computer laboratory solution;
- Supply and install computer equipment where required;
- Configure networks, software, and related technology;
- Deploy qualified digital literacy instructors;
- Develop or adapt the training curriculum;
- Manage the delivery of the digital literacy program;
- Conduct student assessments;
- Provide ongoing maintenance and technical support;
- Monitor the performance of the computer laboratory;
- Provide periodic program reports; and
- Recommend improvements and technology upgrades.

The Partner School or University Will:

- Provide suitable space for the computer laboratory;
- Provide the required institutional support;
- Provide electricity
- Furnish the lab with standard desks and chairs
- Facilitate student participation;
- Support scheduling and integration of the training program;
- Provide appropriate security for the laboratory and equipment;
- Collaborate in monitoring the program; and
- Fulfill the agreed financial or partnership obligations.

This shared-responsibility approach allows educational institutions to focus on their core educational mandate while Unique Technology Solutions provides the specialized technology, technical expertise, instructors, maintenance, and program support required to achieve sustainable results.

6.0 Benefits to Partner Schools and Universities

Participating institutions will benefit from:

- Access to functional and properly managed computer laboratories;
- Reduced burden of recruiting and managing specialized ICT instructors;
- Access to qualified digital literacy instructors;
- Continuous maintenance and technical support;
- Reduced equipment downtime;
- Structured and standardized digital literacy training;
- Improved student digital competencies;
- Better preparation of students for university and employment;
- Improved institutional technology capacity;
- Access to professional technology advice;
- Better utilization of ICT investments; and
- A long-term technology partner responsible for supporting the program.

7.0 Benefits to Students

Students participating in the program will:

- Gain practical computer skills;
- Improve their academic research abilities;
- Become more confident in using technology;
- Learn to use productivity applications;
- Develop responsible internet habits;
- Improve their cybersecurity awareness;
- Prepare for university-level digital learning;
- Improve their employability;
- Gain exposure to technology-related careers;
- Develop skills for entrepreneurship; and
- Build a foundation for advanced ICT training.

8.0 FUNDING STRUCTURE—COST

This initiative is structured as a collaborative partnership between the participating institution and Unique Technology Solutions (UNIQUE) and will be funded through a modest Digital Literacy Support Fee paid by enrolled students during each semester registration period. Under UNIQUE's standard partnership model, each student contributes US\$20.00 per semester, although this amount may be negotiated based on the institution's circumstances, student population, and agreed scope of services. Revenue generated from the program will be shared between the institution and UNIQUE based on a mutually agreed revenue-sharing arrangement, with UNIQUE's share supporting the delivery and management of the digital literacy program, deployment of instructors, maintenance of ICT equipment, and ongoing technical support, while the institution's share supports its administrative and program coordination responsibilities.

9.0 Our Technology

In response to the persistent electricity challenges in Liberia, UNIQUE proposes the deployment of an energy-efficient client/server computing solution designed to minimize power consumption while delivering high performance in academic computer laboratories. The system will utilize a centralized server architecture capable of supporting multiple laboratories simultaneously through thin client technology (Ncomputing L300/M300 thin-client technology—an innovative and cost-effective approach widely adopted by modern institutions in the 21st century).

This solution significantly reduces energy usage compared to traditional desktop setups, requires minimal electrical power to operate, and ensures smooth, reliable, and efficient lab performance for students and instructors.

8.0 Conclusion

Digital literacy is essential to the future of education, employment, entrepreneurship, and national development in Liberia. However, meaningful digital transformation in education cannot be achieved by simply placing computers in schools. Successful technology integration requires a complete ecosystem consisting of functional infrastructure, qualified instructors, structured training, effective program management, continuous maintenance, technical support, and measurable learning outcomes.

Through its integrated technology and school partnership model, **Unique Technology Solutions** seeks to bridge this gap by providing educational institutions with an end-to-end solution for digital literacy and technology integration.

By **setting up and improving computer laboratories, deploying qualified instructors to manage and deliver the program, and providing continuous maintenance and technical support**, Unique Technology Solutions will help ensure that technology investments in the **Lutheran School System** produce the required educational outcomes.

The initiative represents an opportunity to build a digitally skilled generation of Liberians who are better prepared for higher education, employment, entrepreneurship, innovation, and participation in the global digital economy.

Unique Technology Solutions is committed to working with educational institutions and partners to transform computer laboratories from simple rooms containing equipment into active, sustainable centers for digital learning, innovation, and opportunity.
