

Our team of professional delivers high-quality instruction within a Conducive learning environment that prepares and inspires the next Generation of career professionals.

8.0 Our technology?

NComputing represents a smart and sustainable approach to expanding computer access in a cost saving and energy-efficient way. By combining virtualization technology with low-cost devices, it enables more people to benefit from digital resources without the heavy burden of maintaining large numbers of individual computers. As the demand for computer access continues to grow, NComputing offers a practical solution for schools, businesses, and communities striving to embrace the digital age.

DIGITAL LITERACY PARTNERSHIP PROGRAM Brochure

ACADEMY 2025/2026

1.0 About Unique Technology Solutions

Unique Technology Solutions (UNIQUE) is a Liberian-owned ICT company established in 2021. We provide a wide range of IT-related services, including partnerships with universities and high schools to deliver **Computer Lab as a Service (CaaS)**. This program is designed to supply ICT equipment and accessories, develop standardized syllabi and supporting teaching materials, and deploy trained IT personnel to manage and operate the program effectively.

2.0 How is the program design?

It is evident that many Liberian schools lack the technical expertise required to manage and sustain a digital computer literacy program. To ensure seamless integration of this program within educational institutions, **Unique Technology Solutions** shall collaborate with interested schools to provide the appropriate number of computers and qualified trainers to run the program effectively. The number of computers supplied will be determined by the available physical space and the size of the school, particularly its student population.

3.0 Who pays for the program?

The primary beneficiaries of the program are the students, who pay a program fee. Payment is made each semester during the registration period. Revenue generated from the program is shared between both institutions on a percentage basis, in accordance with the terms and conditions outlined in the contract agreement.

4.0 How much does the program cost?

The program costs **US\$20 per semester**. For schools that operate two (2) semesters per academic year, such as high schools, the total annual cost is **US\$40**, payable as **US\$20 for the first semester** and **US\$20 for the second semester**.

5.0 What are the school responsibilities?

- To provide a spacious, well-furnished room within its facility to serve as the computer laboratory;
- To provide reliable electricity to power the laboratory during scheduled class sessions;
- To provide adequate security to ensure the safety and protection of computers and other ICT equipment.

6.0 Who is qualified to enroll?

Research has shown that the earlier a school-going child is enrolled in a computer literacy program, the greater their chances of excelling in an evolving, technology-driven world. Based on this principle, the program enrolls students from **Grade One (1st Grade) through Grade Twelve (12th Grade)**. At the university and vocational institute levels, **all students** are enrolled in the program.

7.0 What are Unique Technology Solutions Responsibilities?

- **UNIQUE** shall equip the computer laboratory with the required number of computers and accessories, based on an assessment of the available space and the size of the school, or upgrade an existing computer lab where necessary;
- Provide qualified trainers to deliver the digital literacy program, or collaborate with existing instructors, and supply training materials and tools that align with international best practices;
- Provide routine maintenance and technical support for the computer lab(s), including the replacement of faulty equipment and accessories, to ensure effective and uninterrupted operations;
- Provide reliable internet connectivity across the computer lab(s) and key administrative offices to enhance productivity and create a conducive learning environment (optional).

8.0 What does the school stand to benefit?

Enhances Academic and Career Readiness

- Students gain skills in word processing, research, data analysis, and presentations.
- Prepares them for higher education, where digital assignments and research are standard.
- Builds a foundation for future careers in technology-driven industries (IT, business, healthcare, engineering, etc.).

Promotes Digital Citizenship and Critical Thinking

- Teaches safe, responsible, and ethical use of technology.
- Helps students evaluate online information, fight misinformation, and protect their privacy.
- Encourages creativity through coding, design, and problem-solving activities.

Bridges the Digital Divide

- Ensures all students, regardless of background, have equal access to essential technology skills.
- Prepares them to compete in a digital economy where computer literacy is no longer optional.
- Reduces barriers for students from communities with limited home access to computers.

9.0 WHY Unique Technology Solutions (UTECHS)

UTECHS has been implementing this program since 2014, prior to formal business registration. Over the years, we have demonstrated readiness, capacity, and sustainability through successful partnerships with several high schools and universities. Our partner institutions include STARZ College of Science and Technology, Grand Bassa University, Faith University, Rudolph Kwanue University, Remedy International School System, Wilson's Daycare, Elementary & Junior High School, Apostolic High School, Building of Tomorrow, Upstairs Christian Academy, Bishop Marwieh School, and Ocean View High School, among others.
